Concept map of a list of immunology terminology

Concept Map: List of Immunology Terminology

After completing Module 1, you should be able to include some of the words in your concept map review! The major concepts covered in this module are highlighted in the word list. Remember that this is a tool for you to use throughout the course.

Legend:

Component Process Organ Cell

After completing Module 1, you should be able to include some of the words in your concept map review! The major concepts covered in this module are highlighted in the word list. Remember that this a tool for you to use throughout the course.

The word list includes the following terms in 5 columns:

- Adaptive system
- Antibody
- Antigen
- Antigen presentation
- Autoimmunity
- Basophil
- B-cell
- Bone marrow
- Cancer
- Cell-mediated
- Complement
- Cytokine
- Cytotoxic T-cell
- Dendritic cell
- Damage-Associated Molecular Patterns (DAMP)

- Eosinophil
- Helper T-cell
- Humoral
- Hypersensitivity
- Immune response
- Immune synapse
- Immunodeficiency
- Immunotherapy
- Inflammation
- Innate system
- Lymph node
- Lymphatic system
- Major Histocompatibility Complex (MHC)
- Memory cell
- Monocyte
- Macrophage
- Natural Killer cell
- Neutrophil
- Patter Recognition Receptor (PRR)
- Pathogen-Associated Molecular Pattern (PAMP)
- Phagocytosis
- Physical Barrier
- Plasmocyte
- Spleen
- T-cell
- Thymus
- Toll-Like Receptor (TLR)
- Vaccination

Some of the terms are highlighted in colours representing components (red), processes (purple), organs (teal), and cells (orange) that were discussed in the module, while other terms are greyed out as they were not discussed.
