

Embedding Content

As instructors, we share a lot of outside content with our students. One thing that we can do to help keep students focused is to embed items right into our Course. I'm using Blackboard here, but this will work for any other LMS, including Canvas, D2L, and Moodle.

In Week 3, I use videos from Microsoft Stream and quizzes from Microsoft Forms. Instead of providing links to these materials, I embed them right into the LMS. This makes it easier for students to engage with the content right there.

Lots of things can be embedded, including popular tools like Padlet and Mentimeter, videos from YouTube, and all sorts of other pieces of content. Look for an 'embed' code when you want to share something.
